

Being human in the age of artificial intelligence

What is Artificial Intelligence ?

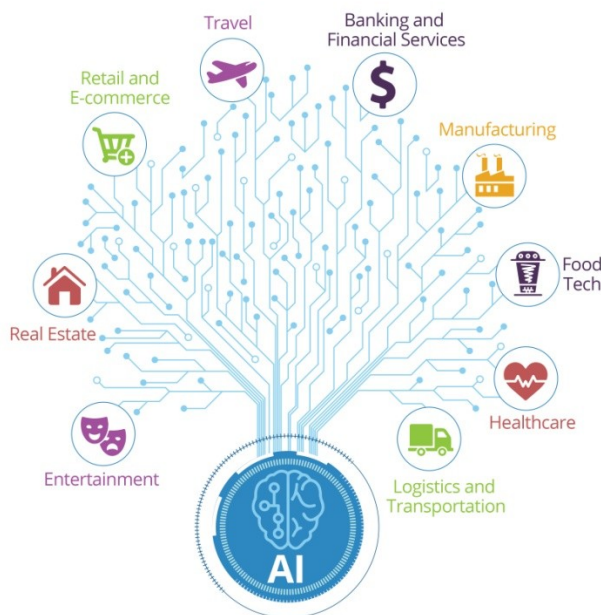

The intelligent behaviour shown by an artificial thing is called artificial intelligence. With AI technology, any machine can speak, read or understand anything like a human being. With AI technology, any machine can work like a human using its own head. Such as recognizing languages, speaking different languages, recognizing sounds, working, communicating with each other, etc. AI is a world famous technology. In today's age of technology, artificial intelligence is used in many fields.

In which Sector is AI technology used?

AI technology is used in many fields. With AI technology, any task can be done in minutes. So many areas are being developed using it.

- 1) Retail shopping and fashion
- 2) Security and Surveillance
- 3) Sports Analytics and Activities
- 4) Manufacturing and Production

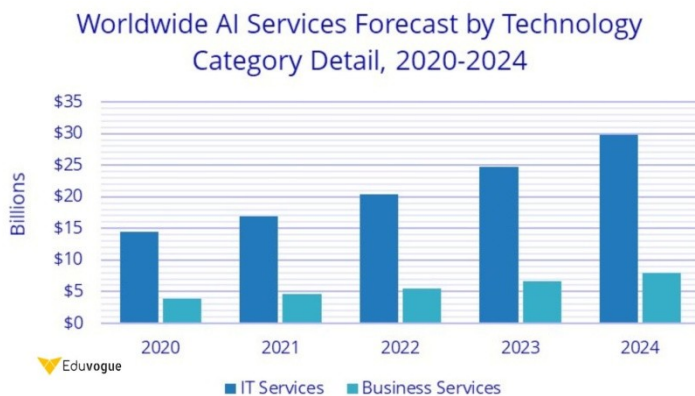

Artificial Intelligence uses of day to day life.

In a bank, artificial intelligence is used to manage transactions, to invest in shares, and to manage assets. There are many uses for artificial intelligence. Applications in the smartphones we use every day are examples of artificial intelligence technology. i.e Google Assistant, Chat bots, AI camera

Artificial intelligence is also used in many places. It is used for voice recognition, face recognition.

It is also used in mobile games. In companies, AI is used to identify employees. Big companies are using AI technology for the convenience and convenience of the customers. Companies have a chat bot on their website. If a customer asks a question or problem, the bot will answer them. And their question is answered. This makes the customer very happy and satisfied.

Many fields are being developed using artificial intelligence. In the coming years, many areas will be developed using Artificial Intelligence. With the help of Artificial Intelligence, machines, computers and instruments can be made and used in place of humans for important tasks in the future. AI can be very useful. Such as smartphones, online banking transactions, online data, files can be kept safe. No one will be able to hack or access them. So the privacy policy will be followed.

Where to learn Artificial Intelligence?

The current use of AI technology will make it very useful to work in this field. Because in the future, everything will be modern, scientists have said. So learning AI is very important. You can learn AI both offline and online. You just have to be more discriminating with the help you render toward other people

Qualification for Artificial Intelligence ?

Any Graduate, Engineer student can also do Artificial Intelligence

Where to learn Offline&Online Artificial Intelligence?

Eduvogue best institute for artificial intelligence. We provide online and offline artificial intelligence course with learn now & Pay on job. You also get a Certificate when you complete the course as well as you will 100% job placement with job offer letter. But now a day we have no time for attending Artificial Intelligence course to manage the course timings with your work schedule, Best Artificial intelligence Online training Institute brings you the convenience of benefits quality Artificial intelligence Online Training on weekend as well as weekdays batches. We offer Online | Offline courses with flexible batch timing. Our expert trainers and teams are highly skilled & experienced people working with top and leading brands.

Top Companies Hired by Eduvogue, Brands like Google, Facebook, Amazon, JP Morgan, and other top Leading companies always give our students first preference during their selection process. We at Eduvogue don't give a financial burden to our students. Learn now with peace of mind.
